

Accelerating the green transition together

One world, many challenges

Lack of clean, affordable energy; scarcity of clean water; rapidly growing megacities and unsustainable use of resources. These are four of the major global challenges the world is grappling with today. Despite being a small country, Denmark wishes to actively help solve global challenges.

Towards a sustainable society

Based on decades of experience with the green transition, Denmark has developed a unique set of skills in renewable energy; energy efficiency; smart, green and liveable cities; water technology; climate adaptation; waste management and circular economy solutions.

Sharing experiences to tackle common challenges

By sharing the accumulated Danish knowledge, experience and solutions with the rest of the world, Denmark seeks to stimulate debate, spur partnerships and inspire others. We believe that through collaboration and dialogue, we can accelerate the transition to a sustainable, low-carbon, resource-efficient global society – but only together.
