

Agriculture & food systems

As a long-standing research-based industry, Denmark's agriculture and food sector is at the forefront of high standards and data-driven practices to ensure that resources are used smarter and more efficiently across the value chain.

Demonstrating the possibility of increased productivity while minimising environmental impact, Danish agriculture contributes to maximising existing solutions as well as implementing technological breakthroughs, biosolutions, and improved agricultural applications.

55-65%

emission reductions by 2030 compared to 1990 levels.

2024

Denmark announces world-first climate tax on agriculture in 2024.
