

Buildings & construction

Danish experiences demonstrate that progressive regulations, efficiency measures and energy renovation are among the simplest and most economically beneficial avenues to decarbonise the built environment.

Offering practical solutions to minimise the consumption of resources while considering social and financial value, Denmark helps partners all over the world improve their environmental and human impact from construction projects.

95 %

New buildings must use 95% less energy per m² in 2020 compared to 1961.

2006

Since 2006, all Danish buildings are sold with an energy performance certificate.
