

Certificate for Low Carbon Urban Heating

This is to certify that

Radisson Blu Falconer Hotel

is supplied with district heating from

Frederiksberg Forsyning A/S

Our district heating network covers 98 % of the heat demand in our supply area and is part of the integrated district heating system in Greater Copenhagen.

The heat is produced from waste to energy and CHP.

This is the most cost effective way of heat production in this region for the society of Denmark and for the community of Copenhagen

Our CO₂ emission is only 113 kg/MWh

This is three times less than the emission from an oil boiler, and we expect it will be almost zero within 20 years

Moreover the heat production is concentrated on a few heat sources with efficient flue-gas cleaning and heavy pollution control
